

IN6 Instrument Definition Updates

Sprint Review Meeting 05/07/16

Correct IN6 IDF Comparison

$S(q, E)$ - IDF Comparison for IN6

IN6 Detector Efficiency

- From design document/Lamp:

$$\eta = 0.94(1 - e^{(-0.363\lambda)}) \text{ for } \lambda < 4\text{\AA}$$

$$\eta = e^{-0.063\lambda}(1 - e^{(-0.363\lambda)}) \text{ for } \lambda > 4\text{\AA}$$

- For Mantid:

$$\eta = 0.94(1 - e^{(-3.283/E^{1/2})}) \text{ for } \lambda < 4\text{\AA}$$

$$\eta = e^{-0.5698/E^{1/2}}(1 - e^{(-3.283/E^{1/2})}) \text{ for } \lambda > 4\text{\AA}$$

- Add back part for $\lambda < 4\text{\AA}$

$$e < 5.1127625 \text{ ? } 0.94 * (1.0 - \exp(-3.283/\sqrt{e})) : \exp(-0.05698/\sqrt{e}) * (1.0 - \exp(-3.283/\sqrt{e}))$$

IN6 with Detector Efficiency Correction $S(\phi, E)$

Crystalline Oxide Ion Conductor

QENS example

Work to Do...

- Check IN6 Instrument Scientists agree with current IDF and detector efficiencies
- For ToF decide on approach for data reduction workflow...
