

# Mantidproject downloads

## Latest release (3.2.0)

1. You can view the changes made in the [release notes](#) 3.  
or view [installation instructions](#) 4. for your system.

2.  
*Download Mantid for \$OS*

You can also download Mantid for  
**OSX, Red hat/Fedora or Windows Vista/7/8 64-bit** 5.  
[Previous releases](#)

## ParaView 3.98.1

You may need to install a compatible version.  
The latest version used by Mantid is 3.98.1

*Download Paraview for \$OS*

You can also download ParaView for  
**OSX, Red hat or Windows**

## Sample datasets

Datasets below contain example data for Mantid

- [MUON data](#)
- [Training data](#)
- [ISIS data](#)
- [ORNL data](#)

## Nightly release

You can view the changes made in the [release notes](#) 6.  
or view [installation instructions](#) for your system.

*Download Mantid for \$OS*

You can also download Mantid for  
**OSX, Red hat or Windows 64-bit**

This mockup assumes the user is on Ubuntu  
(e.g. Download button will link a deb file)

1. IF user has unsupported OS  
(for current release, e.g. OSX<10.8 OR Win32/xp) then:
  - change message to inform them
  - change download URI to old supported OS
  - change latest release number?
  - output supported version?
2. The URL of the download button will change to the related sourceforge download depending on the user's OS. The \$OS variable will also change to reflect what is being used. If the user clicks a link (to download a different OS version) then the button will be updated to display this.
3. Takes the user to: [http://www.mantidproject.org/Release\\_Notes\\_\\$RELEASE](http://www.mantidproject.org/Release_Notes_$RELEASE) where \$RELEASE is obtained from jekyll config files
4. Takes the user to the \$OS specific installation page. These pages will be removed from the wiki, and put into this repo.
5. This link takes the user to a seperate (new) page that displays the last previous releases of mantid for all operating systems. The download links for each release file will be to sourceforge.
6. This link will take the user to mantidproject news
7. The URL will be updated automatically nightly once nightly release is published

# Previous releases

Page will link back to release notes

## Release 3.1.1 (28/02/14)

 [Red Hat](#)  [OSX](#)  [Ubuntu](#)  [Windows 64-bit](#)  [Source](#)

Each title will have an ID (release-N) so that it's easy to link back to that specific release on the page.

## Release ... (??/??/??)

 [Red Hat](#)  [OSX](#)  [Ubuntu](#)  [Windows 64-bit](#)  [Source](#)

Releases will go as far back as we have.

## Release 1.0 (??/??/??)

 [Red Hat](#)  [OSX](#)  [Ubuntu](#)  [Windows 64-bit](#)  [Source](#)
